Objective

Third-year Computer Engineering student with a rare combination of ML depth, full-stack development, and entrepreneurial execution — having shipped live client products, built RAG pipelines, and won a national hackathon. Looking to bring end-to-end ownership and applied AI skills to a high-impact engineering team.

Education

Fr. Conceicao Rodrigues Institute of Technology (FCRIT), Vashi **Aug 2023 – Present**
B.Tech in Computer Engineering with Honours in Artificial Intelligence and Machine Learning *CGPA: 9.08*

Skills

ML / AI	NLP, RAG, Transformers, CNN, LSTM, YOLO, OpenCV, RoboFlow
Data / Cloud	Data Pipelines, FAISS, Docker, Firebase, AWS, GCP, Kubernetes
Languages	Python, JavaScript, C
Databases	MySQL, MongoDB
Backend	Node.js, Express.js, Flask, FastAPI, ASP.NET
Frontend	React.js, Next.js, React Native, Flutter
Tools	Git/GitHub, HuggingFace, Arduino IDE, Figma, Canva

Achievements

TECHNOVA 2025 — Xavier Institute of Technology **Jan 25–26, 2025**
• **1st place** in App Development — built *Roots*, a community social media app connecting users via contacts, location, and family graphs.

Work Experience/Internships

Fr. Conceicao Rodrigues Institute of Technology **Apr 2026 – Present**
Machine Learning Intern *Mumbai*

- Built an **ML pipeline** for **predictive fault detection** — detects and classifies **ball bearing defects** from digital twin sensor data (collab with Mech. Engg. dept.); applied **K-Means clustering** to label unlabelled faulty data, then trained a **Random Forest multi-class classifier**.
- Researched and benchmarked alternative models including **SVM**, Logistic Regression, and Decision Trees to optimise model selection and improve robustness.

SVIK IT Solutions and Consultancy **Jun 2025 – Apr 2026**
Software Engineer Intern *Navi Mumbai (Hybrid)*

- Developed a full-stack **Project Management System** (live client product) with **modular architecture** and **Role-Based Access Control (RBAC)**, supporting flexible subscription tiers.
- Designed the **relational database schema from scratch**; presented **weekly progress reports** to stakeholders and collaborated with design and SQL teams to incorporate feedback.

Altimetrik **Jun 2025 – Jul 2025**
Summer Intern — Data Engineering *Bengaluru*

- Contributed to a **RAG-based LLM chatbot** for enterprise use: helped document workflows and gained exposure to **data pipelines, system design, and production deployment**.
- Built an independent end-to-end **Retrieval-Augmented Generation (RAG) pipeline** for **document ingestion, semantic search, and question answering** — implemented chunking, embedding generation, and **FAISS**-based vector retrieval using **Hugging Face Transformers**.

Indian Institute of Technology, Bombay **Jun 2025 – Jul 2025**
Student Intern *Mumbai*

- Built the **Python GUI** for a **Video Amplification & Fault Diagnosis** tool — visualises frame-by-frame vibrational data and displays amplified video output; served as the integration layer for an underlying **MATLAB algorithm**.

ZarvisGenix **Jun 2024 – Jul 2024**
Mobile App Development Intern *Remote*

- Built a **Flutter** mobile app end-to-end; integrated a **scan & pay** feature using **Plaid Sandbox** for payment testing → **30% reduction** in transaction time.

Entrepreneurial Ventures

Kode & Co. | kodeandco.online

Apr 2025 – Present

Tech and Operations Lead

Freelancing

- Started a freelance digital solutions venture; closed **4+ client contracts** including **CIBA Mumbai** and **Tusk Oral Care** by leading sales meetings and translating business requirements into technical scopes.
- Built a client site with a **centralised admin panel** and **role-based authentication**; integrated **Google Calendar & Gmail APIs** via **GCP OAuth 2.0** to automate scheduling and communication; handled hosting, deployment, and post-launch support independently.
- Replaced a client's third-party booking app with a **custom booking system**, managing **feedback cycles** and **iterative delivery** end-to-end.

Projects

AI-Powered Sales Forecasting Dashboard | *FastAPI, Next.js, TensorFlow, LSTM, XGBoost, Recharts*

[GitHub](#)

- Built a full-stack **sales & inventory forecasting platform** (**FastAPI, Next.js**) using an **MLP + XGBoost ensemble** for accurate 30-day predictions.
- Engineered **20+ features** (seasonality, lags, categorical encoding) and developed a **lead-time-aware safety stock system** to prevent stockouts.

Ball Bearing Fault Diagnosis System | *Python, Scikit-learn, SMOTE, K-Means, Random Forest*

[GitHub](#)

- Developed a **machine learning pipeline** to detect and classify **ball bearing defects** using digital twin sensor data; applied **K-Means clustering** to label unstructured faulty data before training a **Random Forest multi-class classifier**.
- Handled severe class imbalance using **SMOTE** and validated performance via **k-fold cross-validation** with an **80-20 train-test split**; achieved **95% accuracy** and **98.7% ROC-AUC** on unseen pump data, showing strong real-world generalisation.

AI Email Follow-up Automation | *Firebase, Node.js, React, Grok API, Google Sheets API*

[GitHub](#)

- Built an **AI-powered email automation system** generating contextual follow-ups based on user interaction patterns; designed an **event-driven workflow engine** with trigger-based logic (no-reply / open / response) for multi-step communication sequences.

Skin Disease Classifier | *PyTorch, CNN, DenseNet121, Transfer Learning, Grad-CAM, Flask*

[GitHub](#)

- Benchmarked **3 transfer-learning architectures** (MobileNet, EfficientNet, DenseNet121) across **22 dermatological conditions**; selected DenseNet121 for peak diagnostic accuracy.
- Mitigated severe class imbalance with custom **Weighted Random Samplers + Weighted Cross-Entropy Loss**; built a **Flask web app** integrating **Grad-CAM** visualisations to highlight the skin features driving each prediction.

Relevant Coursework / Certifications

Data Mining and Business Intelligence • Big Data Analytics • IoT and Cloud Computing Laboratory (AWS Academy)

Co-Curricular Activities

Agnel Robotics Club, FCRIT

Jun 2025 – Present

Technical Team Member

Navi Mumbai

- Building **object detection & classification pipelines** using **OpenCV** and **YOLO** for **ROBOCON 2026**; programmed microcontroller systems via **Arduino IDE** and mentored juniors on robotics fundamentals.

Artificial Intelligence & Deep Learning Club, FCRIT

Jun 2024 – Jun 2025

Jr. Technical Coordinator

Navi Mumbai

- Helped organise **Webrush** (100+ participants), managing technical logistics and web infrastructure; built the official **HackQuinox website** and multiple club platforms end-to-end.
